Project Type: **Application**

# PHASE 1

## Abstract

As internet has become part of everyone's life , people started depending on it for all their day-to-day activities . This made changes in almost all work fields , recruitment process is one among them and it has changed a lot gradually in their systematic approaches . Finally, it reached to a stage that most of the recruitment processes are being done online. As recruitments are round the year activity that involves thousands of people, it became more important to make the process more efficient and automatic . It involves various processes like finding, attracting ,assessing, interviewing and hiring a new employee in an automated system.

Recruitments are even done manually , where in everything is done directly by people , from job offering to finding a job , everything should be done manually . Sometimes , due to lack of proper information one can loose an opportunity , or sometimes company itself might loose potential applicant for the job . Thus the need for an online recruitment system increased and this got the applicants and companies closer to each other.

Online recruitment is basically a recruitment method , which involves job seekers on the internet . It has been receiving very high attention in recent days . This system helps people to find jobs of their interest in a easy and simple manner. It helps the organisation to get a perfect candidate for the job. It also helps the applicant to expose their talents and skills and get a perfect job.

Main Objectives of a Online Recruitment System :

- It provides efficient , economic and effective recruitment system.
- It increases both quality and quantity of the job seekers.
- It reduces paper and administrative work.

- It streamlines the recruitment process and reduce the corporates overall recruitment cycle.

## INTRODUCTION

Online recruitment system is a platform to hold all the process of the employment for the organization. It is an automated system with the various component to facilitate the processes involved in finding, attracting, assessing, interviewing and hiring a new employee.

Presently the system includes a manual process through files, folders and binders. Eventually, the job seeker has to find the company which is offering of the required profile. Then check the eligibility of the post or do a search on eligibility basis by visiting the various company which he knows of. In this manual process, it is bound to happen that seeker may not an offer which exactly matches his/her profile. Due to this lack of information person lost an opportunity and company losses a potential applicant for the job post. Currently there is definite need of computerized online system where both applicant and the company can come closer. The system helps both types of user in providing the ease of the manual work. This system also provides the candidate to write their skills and talents with a full interface to get a job. It helps the organization also to search for a profile with specific skill only, so they do not have to go through every job seeker asking him/her about the skill they needed.

Once the planning and analysis of the project are completed, the design phase begins. The goal of system design is to transform the information collected about the project into the blueprint structure which will serve as a base while constructing the system.

It is considered to be an unwieldy process as most of the errors are introduced in this phase. However, if an error gets unnoticed in the later process it may become difficult to track them down.

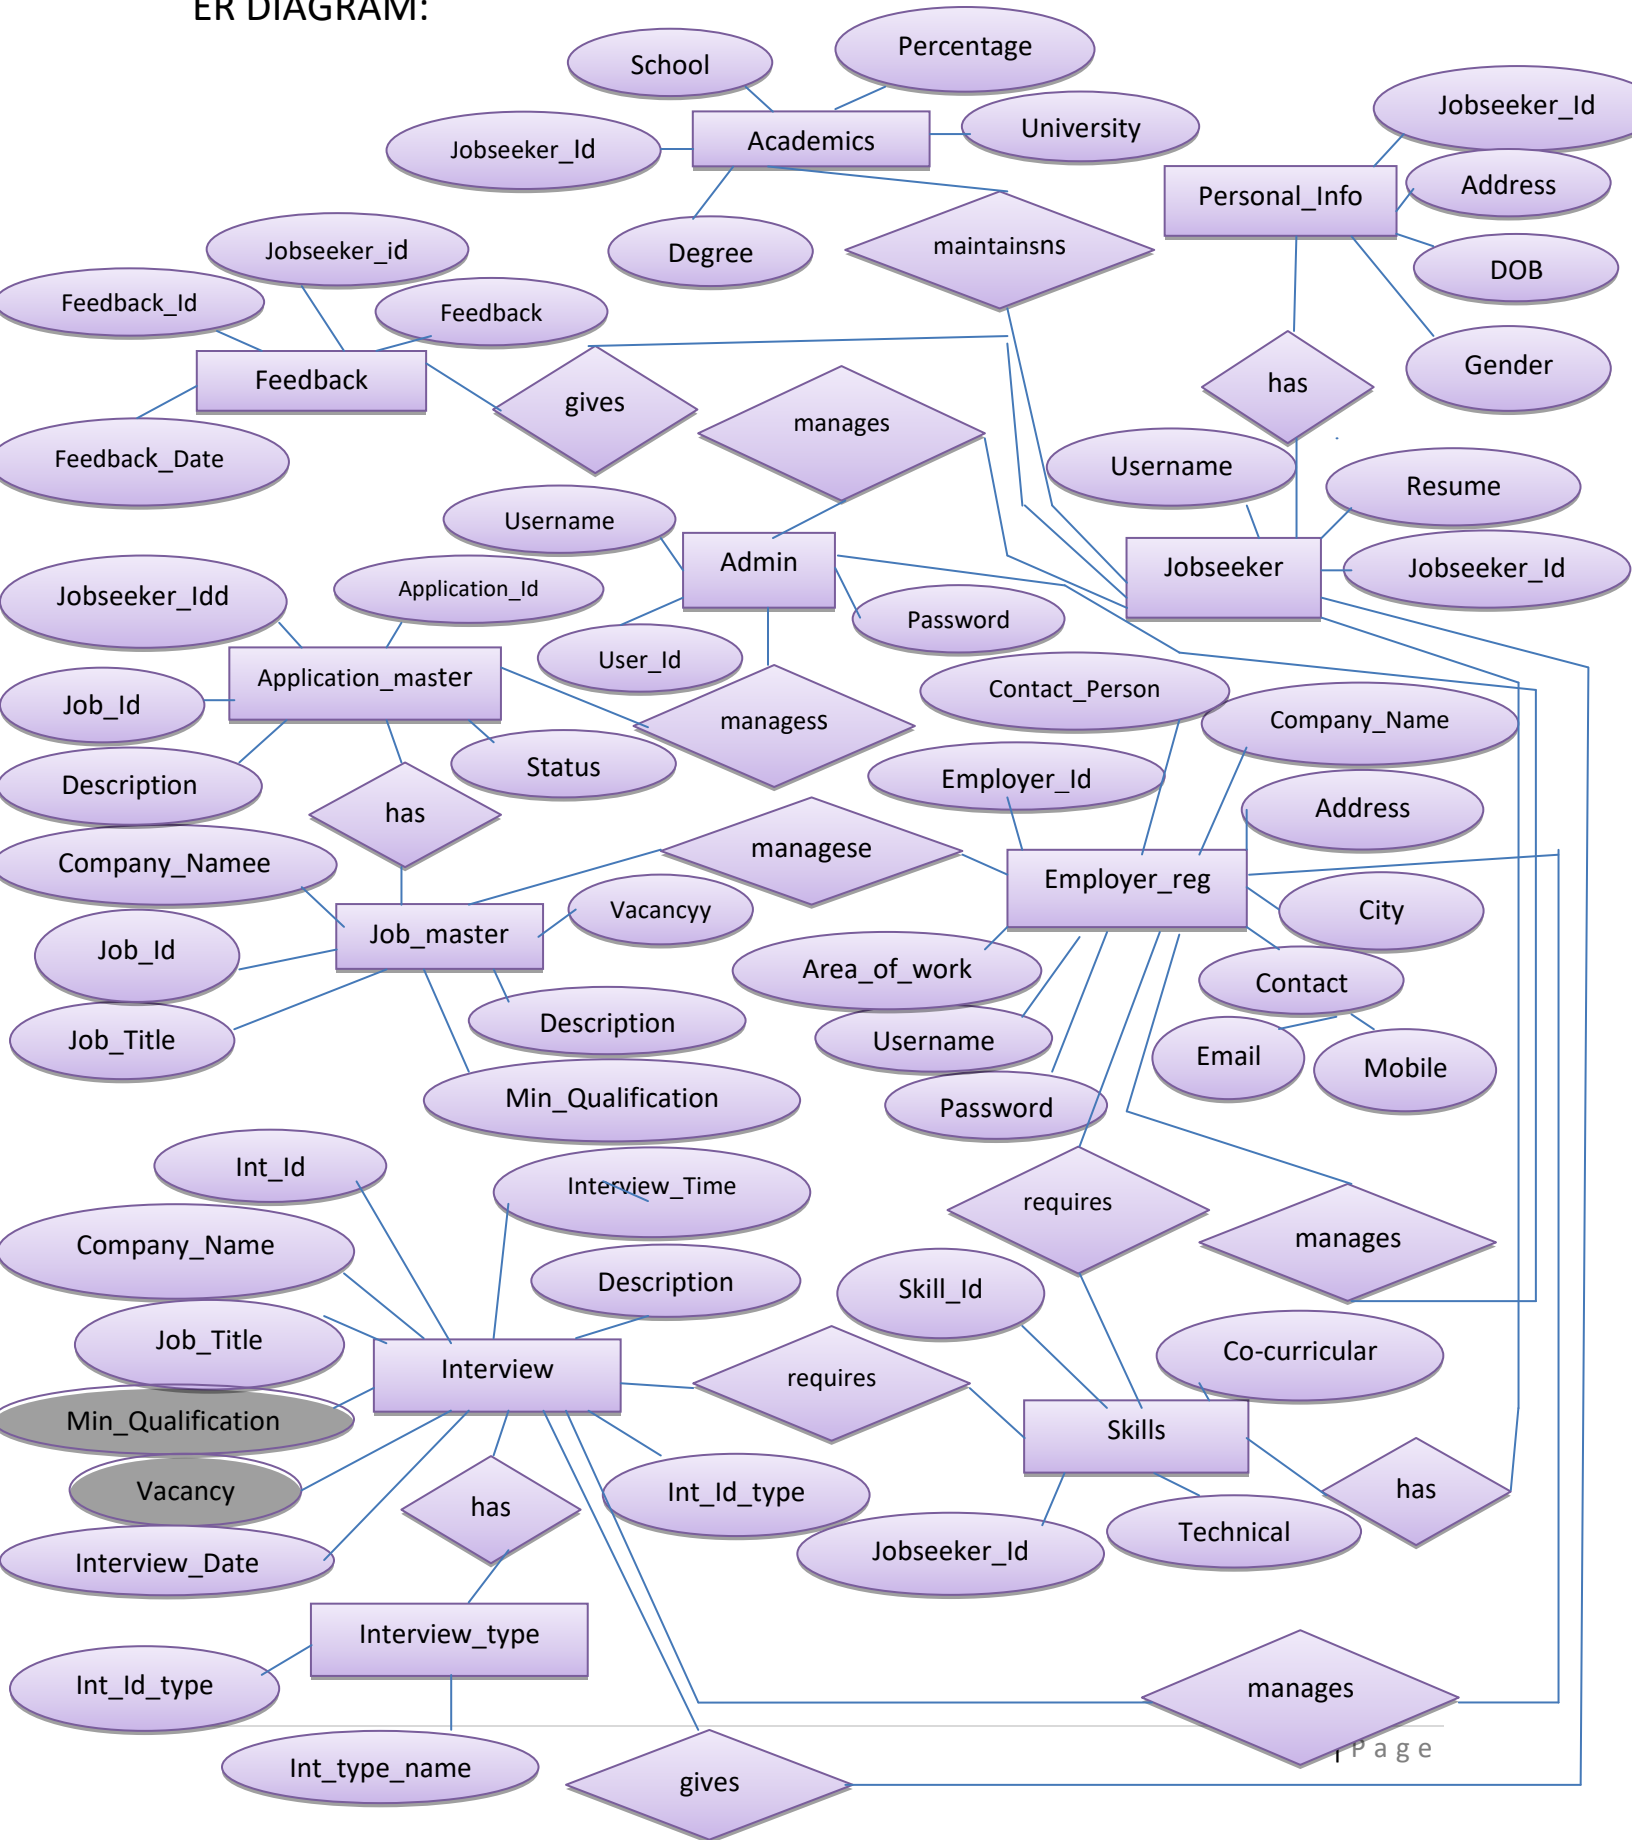

In our system, we are developing a system which helps in recruitment management for the employer. It will minimize the problems faces by both candidates and the recruiters in the process.

### **3.PROJECT SCOPE:**

Online Recruitment System aims at automation of the following processes

- A. Employees get to register in their company website
- B. Employees get to look for companies and choose the jobs which companies offer.
- C. Jobseeker can apply to job availed by employees.
- D. Offer letters stack up for both the employees and the companies which they can either accept or reject to create an interview

<b>TABLES AND CONSTRAINTS:</b>
--------------------------------

**Employer\_reg:**

Attribute Name	Data Type	Constraint
<b>Employer_Id</b>	<b>Int(11)</b>	<b>Primary key</b>
<b>Company_name</b>	<b>Varchar(20)</b>	<b>NOT NULL</b>
<b>Contact_Person</b>	<b>Varchar(20)</b>	<b>NOT NULL</b>
<b>Address</b>	<b>Varchar(100)</b>	<b>NOT NULL</b>
<b>City</b>	<b>Varchar(20)</b>	
<b>Email</b>	<b>Varchar(40)</b>	<b>NOT NULL</b>
<b>Mobile</b>	<b>Int(20)</b>	<b>NOT NULL</b>
<b>Area_of_work</b>	<b>Varchar(40)</b>	<b>NOT NULL</b>
<b>Username</b>	<b>Varchar(20)</b>	<b>NOT NULL</b>
<b>Password</b>	<b>Varchar(20)</b>	<b>NOT NULL</b>

**Job\_master:**

Attribute Name	Data Type	Constraint
<b>Job_Id</b>	Int(11)	Primary key
<b>Commpany_Name</b>	Varchar(20)	<b>NOT NULL</b>
<b>Job_Title</b>	Varchar(20)	<b>NOT NULL</b>
<b>Vacancy</b>	Int(11)	<b>NOT NULL</b>
<b>Min_Qualification</b>	Varchar(50)	<b>NOT NULL</b>
<b>Description</b>	Varchar(200)	<b>NOT NULL</b>

### Jobseeker:

Attribute Name	Data Type	Constraint
<b>Jobseeker_Id</b>	Int(11)	Primary key
<b>Jobseeker_name</b>	Varchar(20)	<b>NOT NULL</b>
<b>Qualification</b>	Varchar(20)	<b>NOT NULL</b>
<b>Resume</b>	Varchar(200)	<b>NOT NULL</b>
<b>Username</b>	Varchar(20)	<b>NOT NULL</b>
<b>Password</b>	Varchar(20)	<b>NOT NULL</b>

### ADMIN:

Attribute Name	Data Type	Constraint
User_Id	Int(11)	Primary key
Username	Varchar(20)	NOT NULL
Password	Varchar(20)	NOT NULL

### ACADEMICS:

Attribute Name	Data Type	Constraint
Jobseeker_Id	Int(11)	Foreign key
Degree	Varchar(20)	NOT NULL
University	Varchar(20)	NOT NULL
School	Varchar(20)	NOT NULL
Percentage	float	NOT NULL

### PERSONAL\_INFO:

Attribute Name	Data Type	Constraint
Jobseeker_Id	Int(11)	Foreign key
Address	Varchar(50)	NOT NULL
DOB	date	NOT NULL
Gender	Varchar(6)	NOT NULL

**SKILLS:**

Attribute Name	Data Type	Constraint
Skill_Id	Int(11)	Primary key
Co-curricular	Varchar(80)	NOT NULL
Technical	Varchar(80)	NOT NULL
Jobseeker_Id	Int(11)	Foreign key

**APPLICATION\_MASTER:**

Attribute Name	Data Type	Constraint
Application_Id	Int(11)	Primary key
Jobseeker_Id	Int(11)	Foreign key
Job_Id	Int(11)	Foreign key
Status	Varchar(30)	NOT NULL
Description	Varchar(30)	NOT NULL

**FEEDBACK:**

Attribute Name	Data Type	Constraint
Feedback_Id	Int(11)	Primary key
Jobseeker_Id	Int(11)	Foreign key
Feedback	Varchar(200)	NOT NULL
Feedback_Date	date	NOT NULL

**INTERVIEW:**

Attribute Name	Data Type	Constraint
Int_Id	Int(11)	Primary key
Company_Name	Varchar(20)	NOT NULL
Job_Title	Varchar(50)	NOT NULL
Vacancy	Int(11)	NOT NULL
Min_Qualification	Varchar(50)	NOT NULL
Description	Varchar(100)	NOT NULL
Interview_Date	date	NOT NULL
Interview_Time	time	NOT NULL
Int_Id_type	Int(6)	Foreign key

**INTERVIEW\_TYPE:**

Attribute Name	Data Type	Constraint
Int_Id_type	Int(6)	Primary key
Int_type_name	Varchar(20)	NOT NULL

## *PHASE 2*

**NORMALIZATION** is a database design technique that reduces data redundancy and eliminates undesirable characteristics like Insertion, Update and Deletion Anomalies. Normalization rules divides larger tables into smaller tables and links them using relationships. The purpose of Normalization in DBMS is to eliminate repetitive data and ensure data is stored logically.

## **THE NORMALIZED FORM OF OUR SCHEMAS ARE SHOWN BELOW:**

### **1)Job master:**

Job_ id	Comp_ name	JobTitle	Vacancy	Minimum Qualification	Description
------------	---------------	----------	---------	--------------------------	-------------

**The functional dependency for the above table is given as:**

**Job\_id → Comp\_name, Job\_title, Vacancy, MinQualification, Description**

**Candidate key: Comp\_id**

### **Conditions for 1NF:**

- Each table should have only single or atomic values for 1NF therefore the above table is in 1NF.

### **Condition for 2NF:**

**For a table to be in 2NF it should satisfy following criterias:**

- The table should be in 1NF.
- It should be independent of **Partial dependency** which states non-prime attributes functionally depends on subset of candidate key.
- No non- prime attributes should be functional dependent on subset of candidate key.

*Therefore, The above table is also in 2NF since the non prime attributes like Comp\_name , phone and Email\_id does not depend on any of the subset of candidate key that is this relation is independent of **Partial dependency.***

**Condition for 3NF:**

**For a table to be in 3nf it should satisfy following criterias:**

- The table should be in 2Nf.
- The given table should be deprived of **transitive dependency** which states that a non-prime attribute functionally depends on a non-prime attribute.
- No non-prime attributes should be functional dependent on a non-prime attribute.

## Condition for BCNF:

For a relation to be in bcnf it should follow these criteria:

- The table should be in 3NF.
- And for any dependency  $A \rightarrow B$ , A should be a **Super key**.

*Therefore, the given relation is already in BCNF.*

## 2)Feedback

feedbackId	Jobssek_id	Feedback	feedbackDate
------------	------------	----------	--------------

The functional dependency is given as :

**FeedbackId  $\rightarrow$  JobSeek\_id, Feedback, FeedbackDate**

For a relation to be in BCNF:

- The table should be in 3NF.
- And for any dependency  $A \rightarrow B$ , A should be a Super key.

The above given table is already in BCNF,

where, FeedbackId is the super key and candidate key.

### 3)ADMIN:

Userid	username	password
--------	----------	----------

Functional dependency for the above table is given by

Userid  $\rightarrow$  username, password

For a relation to be in BCNF:

- The table should be in 3Nf.
- And for any dependency  $A \rightarrow B$ , A should be a Super key.

*Therefore, the above table is already in **BCNF**, where **userid** is the super key and candidate key as well.*

#### 4)Application Master:

Application_id	Jobseekid	jobid	description
----------------	-----------	-------	-------------

The functional dependency is shown as:

**Application\_id  $\rightarrow$  jobseekId,JobId,description**

*This relation is already in BCNF.*

*where **Exp\_id** is the super key and candidate key as well.*

## 5)JOB SEEKER:

Jobseekid	Jobseekername	Resume	Qualification	Username
-----------	---------------	--------	---------------	----------

The functional dependency for the above table is given by:

**Jobseekid** → **Jobseekername, Username, Resume, Qualification**

**Resume** → **qualification**

Candidate key = (Jobseekid)

*Here, non- prime attribute 'Qualification' functional depends on one more non prime attribute 'Resume' therefore **Transitive dependency** holds true in this relation. Therefore, the above relation is not in 3NF.*

Thus the given relation decomposed and new tables are formed :

### R1

Jobseekid	Jobseekername	Username	Resume
-----------	---------------	----------	--------

## R2

Resume	Qualification
--------	---------------

### 6)PERSONAL INFO:

Jobseekid	gender	DOB	Address
-----------	--------	-----	---------

The functional dependency is shown as:

**Jobseekid → DOB, Address, Gender**

This relation is already in **BCNF**.

where **Jobseekerid** is the super key and candidate key as well.

### 7)EmployerReg:

Employe rid	companyNa me	ContactPer son	zipcod e	Cit y	Ema il	Mobi le	Area_wo rk	username	password
----------------	-----------------	-------------------	-------------	----------	-----------	------------	---------------	----------	----------

The Functional dependency for this relation is given by:

$\text{Employeeid} \rightarrow \text{companyName, ContactPerson, zipcode, City, Email, Mobile, Area\_work, username, password}$   
 $\text{address} \rightarrow \text{City}$

Candidate key = Employeeid

Super Key = Employeeid

*The above relation is not in 3Nf since non prime attribute 'city' functionally depends on one more non prime attribute 'zipcode' therefore **transitivity dependency** holds true for this relation.*

Thus the given relation decomposed and new tables are formed :

**R1:**

Employee rid	companyNa me	ContactPer son	zipcod e	Ema il	Mobi le	Area_wo rk	username	password
-----------------	-----------------	-------------------	-------------	-----------	------------	---------------	----------	----------

**R2:**

Zipcode	city
---------	------

## 8)ACADEMICS:

Highschool	University	Percentage	Jobseekid	Degree
------------	------------	------------	-----------	--------

***The above table isn't in 1NF since the values in Percentage attribute are not atomic but composite.***

**Therefore, the new table is formed as:**

Highschool	Secondary	Highschool percentage	Secondary percentage	Jobseekrid	Degree
------------	-----------	--------------------------	-------------------------	------------	--------

**Now ,the functional dependency can be written as :**

**9)SKILLS:**

Skill_id	Co_curricular	Technical	JobseekId
----------	---------------	-----------	-----------

The Functional dependency for this relation is given by:

**Skill\_id → Co-curricular, Technical**

Candidate key = Skill\_id

Super Key = Skill\_id

***Therefore the above relation is already in BCNF***

**10)INTERVIEW:**

Int_id	Compa nyNam e	Jobtitle	Int_id_type	Vacancy	Minquali fication	Descr p.	inDat e	inTim e
--------	---------------------	----------	-------------	---------	----------------------	-------------	------------	------------

The functional dependency for the above table is given by:

$\text{Int\_id} \rightarrow \text{CompanyName, Jobtitle, Int\_id\_type, Vacancy, Min qualification, Descrp., inDate, inTime}$

$\text{Int\_id} \rightarrow \text{Int\_id\_type}$

Candidate key = Int\_id

*This relation is already in BCNF*

## 11)INTERVIEW TYPE:

Int_id_type	Int_id_name
-------------	-------------

The Functional dependency for this relation is given by:

$\text{Int\_id\_type} \rightarrow \text{int\_type\_name}$

Candidate key = int\_id\_type

*Therefore, the above relation is already in BCNF*

## FINAL SCHEMAS:

### 1)Job master:

Job_ id	Comp_ name	JobTitle	Vacancy	Minimum Qualificatio n	Description
------------	---------------	----------	---------	------------------------------	-------------

### 2)Feedback

feedbackId	Jobssek_id	Feedback	feedbackDate
------------	------------	----------	--------------

### 3)ADMIN:

Userid	username	password
--------	----------	----------

### 4)Application Master:

Application_id	Jobseekid	jobid	description
----------------	-----------	-------	-------------

**5)Job seeker:**

Jobseekid	Jobseekername	Username	Resume
-----------	---------------	----------	--------

Resume	Qualification
--------	---------------

**6)Personal Information:**

Jobseekid	gender	DOB	Address
-----------	--------	-----	---------

**7)Employee Registration:**

Emplo yerid	compan yName	Contact Person	zipc ode	Em ail	Mo bile	Area_ work	userna me	password
----------------	-----------------	-------------------	-------------	-----------	------------	---------------	--------------	----------

Zipcode	city
---------	------

**8)Academics:**

Highschool	University	Percentage	Jobseekid	Degree
------------	------------	------------	-----------	--------

**9)Skill:**

Skill_id	Co_curricular	Technical	JobseekId
----------	---------------	-----------	-----------

**10)Interview:**

Int_id	CompanyName	Jobtitle	Int_id_type	Vacancy	Minqualification	Description	inDate	inTime
--------	-------------	----------	-------------	---------	------------------	-------------	--------	--------

**11)Interview Type:**

Int_id_type	Int_id_name
-------------	-------------

**PHASE 3****Requirements:**

### **Hardware Requirements:**

- A minimum of Pentium 4 with a speed of 1.3 GHz.
- A minimum RAM capacity of at least 512MB.
- Hard disk capacity of at least 100mb free space.

### **Software Requirements:**

- Windows 7 and above
- Wamp or Xampp Server
- Web Browser (Firefox or Chrome)

### **How to run this project:**

1. Extract Project.
2. Copy Extracted Folder that is 'Online-Job-Portal-System' to c:\xampp\htdocs.
3. Now Open Phpmyadmin.
4. Create New Database Named "job".
5. Select Newly Created Database and Import Database File 'job.sql' available in root directory of Project Folder.
6. Now go to localhost through xampp and use this url 'http://localhost/Online-Job-Portal-System/'

### **Flow of control:**

**Purpose:** Homepage for admins, jobseekers and employees to login.

The screenshot displays a web application interface for an online recruitment system. At the top, a dark blue navigation bar contains three buttons: 'Home', 'Employer', and 'Job Seeker'. The 'Job Seeker' button is highlighted. Below the navigation bar, the main content area is divided into two sections. The left section, titled 'Job Seeker Registration Form', contains a registration form with the following fields: 'JobSeeker Name:', 'Qualification:', 'Upload Resume:' (with a 'Choose File' button and 'No file chosen' text), 'User Name:', and 'Password:'. A 'Submit' button is located at the bottom of the form. The right section, titled 'Login', contains a login form with the following fields: 'User Name', 'Password', and 'User Type' (a dropdown menu currently showing 'Employer'). A 'Login' button is located at the bottom of the login form.

Job Seeker Registration Form	
JobSeeker Name:	<input type="text"/>
Qualification:	<input type="text"/>

## JobseekerReg.php:

**Use:**Page where Jobseeker can register themselves.

```
<div class="article">
```

```
<h2><span><a href="#">Job Seeker Registration Form</a></span></h2>
```

```
<div class="login">
```

```
<form action="JobSeekerInsert.php" method="post" onSubmit="return  
validateForm(this,arrFormValidation);" enctype="multipart/form-data" id="form2">
```

```
<table width="100%" border="0" cellpadding="0" cellspacing="0">
```

```
<tr>
```

```

        <td>JobSeeker Name:</td>

        <td><span id="sprytextfield3">

            <label>

                <input type="text" name="txtName" id="txtName" />

            </label>

            <span class="textfieldRequiredMsg">Enter Name</span></span></td>
    </tr>

    <tr>

        <td>Qualification:</td>

        <td><label>

            <input type="text" name="txtQualification" id="txtQualification" />

            </label>

            <span class="textfieldRequiredMsg">Enter
Qualification</span></td>
    </tr>

    <tr>

        <td>Other:</td>

        <td><label>

            <input type="text" name="txtOther" id="txtOther" />

            </label></td>
    </tr>

    <tr>

        <td>Upload Marksheet:</td>

        <td><label>

            <input type="file" name="txtFile" id="txtFile" />

```

```

        </label></td>

</tr>

<tr>

    <td>User Name:</td>

    <td><span id="sprytextfield8">

        <label>

            <input type="text" name="txtUserName" id="txtUserName" />

        </label>

        <span class="textfieldRequiredMsg">Enter User Name</span></span></td>

</tr>

<tr>

    <td>Password:</td>

```

## JobseekerInsert.php:

**Use:** Fetch and insert new jobseeker details to jobseekerReg database.

```
<head>

<meta http-equiv="Content-Type" content="text/html; charset=utf-8" />

<title>Untitled Document</title>

</head>

<body>

<?php
```

```
$Address=$_POST['txtAddress'];
```

```
$BirthDate=$_POST['txtBirthDate'];
```

```
$Gender=$_POST['cmbGender'];
```

```
    $Name=$_POST['txtName'];
```

```
    $Qualification=$_POST['txtQualification'];
```

```
    $path1 = $_FILES["txtFile"]["name"];
```

```
    $Status="Pending";
```

```
    $UserName=$_POST['txtUserName'];
```

```
    $Password=$_POST['txtPassword'];
```

```
    $UserType="JobSeeker";
```

```
    if ($Qualification=="Other")
```

```
    {
```

```
        $Qualification=$_POST['txtOther'];
```

```
    }
```

```
        move_uploaded_file($_FILES["txtFile"]["tmp_name"],"upload/"  
.$_FILES["txtFile"]["name"]);
```

```
        // Establish Connection with MYSQL
```

```
        $con = mysqli_connect ("localhost","root","","job");
```

```
$sql="insert into
```

```
jobSeeker_reg(JobSeekerName,Qualification,Resume,Status,UserName>Password) VALUES (
```

```
'$Name','$Qualification','$path1','$Status','$UserName','$Password'
```

```
);
```

```
        // execute query
```

```
var_dump($sql);

    if(mysqli_query ($con,$sql)){

        echo '<script type="text/javascript">alert("Registration Completed
        Successfully");window.location=\'index.php\';</script>';

    }

    $sql1="insert into personal_info(address,dob,gender) VALUES
    ('$Address','$BirthDate','$Gender')";

    var_dump($sql1);

    if(mysqli_query ($con,$sql1)){

        echo '<script type="text/javascript">alert("Registration Completed
